

Cooking data with PHP (Solutions)!

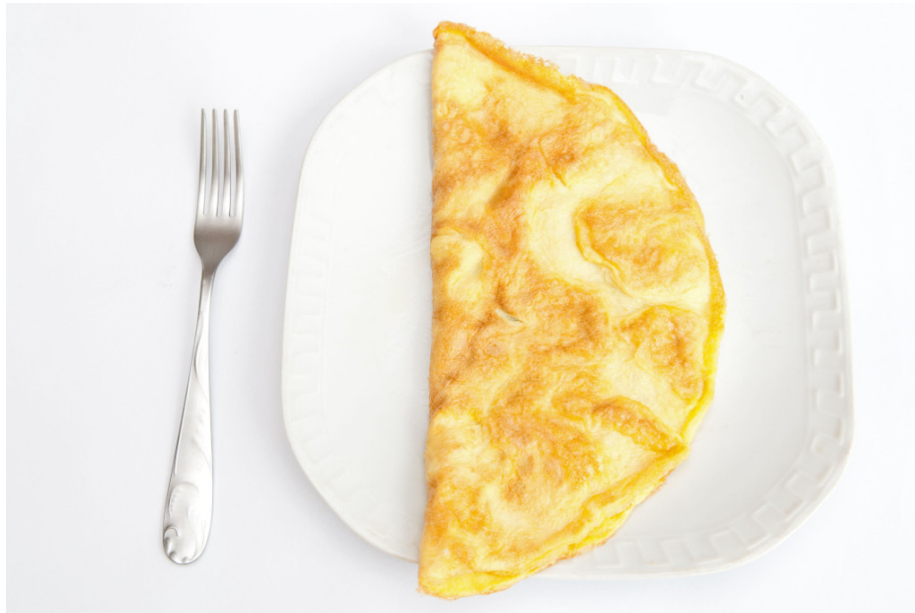

Figure 1: Omelette au Fromage

Dictionary

```
$string = file_get_contents("dictionnaire.txt", FILE_USE_INCLUDE_PATH);  
$dico = explode("\n", $string);
```

The result is an array containing all the words.

Exercices

- How many words this dictionary contains?

```
echo count($dico); // answer: 336532
```

- How many words have exactly 15 characters?

```
$words_15 = array();  
foreach ($dico as $word) {  
    if (strlen($word) == 15) {  
        array_push($words_15, $word);  
    }  
}
```

```

}
echo count($words_15); // answer: 12298

```

- How many words containing the letter 'w'?

```

$words_w = array();
foreach ($dico as $word) {
    if (strpos($word, "w") !== false) {
        array_push($words_w, $word);
    }
}
echo count($words_w); // answer: 537

```

- How many words end with the letter 'q'?

```

$words_q = array();
foreach ($dico as $word) {
    if (substr($word, -1) == "q") {
        array_push($words_q, $word);
    }
}
echo count($words_q); // answer: 8

```

To be continued..
